

AILU's special interest groups

AILU hosts a number of special interest groups (SIGs) to better support members who have particular interests in common. These include a Job Shop Group within which subcontract laser-based engineering companies organise their own events, surveys and a web site forum. Within another SIG, the Market Development Group, members are working to encourage greater use of lasers in manufacturing. This group is responsible for the Design for Laser Manufacture website at www.designforlasermanufacture.com.

Now, with the growing medical sector in the UK and worldwide, AILU has launched a medical SIG for both clinicians and those involved in the use of lasers for manufacture of medical components and the supply of laser equipment to the medical sector.

The Medical Group

The activities of the Medical Group will address the interests of laser processing professionals involved in producing devices, implants and instrumentation for the medical and dental sectors, as well as the interests of clinicians in these sectors.

Free Membership of the Medical Group

Membership of the Medical Group is free. Members can help shape events and other medical sector activities. AILU members will also be able participate in on-line discussions and networking.

To enrol or for more information on the Medical Group, contact the AILU office.

AILU, 100 Ock St, Abingdon, Oxon OX14 5DH UK
